

GRIP SHEET®

Protecting your products... and your profits.

GRIP SHEET® is a non-slip, protective insert paper sheet user to reduce breakage and protect products distributed on pallets.

GRIP SHEET®

- *Reduce slip between layers*
- *Stabilize loads*
- *Isolate products*
- *Reduces other packaging material*
- *Eliminates non-value added operations*
- *Are recycled and recyclable*

Efficient with all types of loads :

Folding Carton

Cardboard Boxes

Corrugated Trays

Paper Bags

Plastic Bags

Glass

Metal

Rubber

Wood

And many more

GRIP SHEET®

Protecting your products... and your profits.

GRIP SHEET® is available in recycled kraft and in a waterproof version. It is offered in a variety of standard paper weights, widths and lengths to best fit your application.

GRIP SHEET® has been designed from the start with automation and economy in mind.

All versions are available with alternated band coating to ensure maximum performance with automatic palletizers.

ANTI-SLIPPAGE

GRIP SHEET® is a stabilizing insert sheet that holds loads in place by increasing the coefficient of friction between the layers on a pallet.

It may be used alone, or in combination with, and to increase the efficiency of, other products such as strapping, tape, stretch or shrink film.

PROTECTS

GRIP SHEET® is water repellent and has a low permeability to gases. It helps in the protection of products from moisture. Some formats are suitable for direct contact with food products.

ECONOMICAL

GRIP SHEET® has a low unit price and is comfortably competitive with alternative methods of stabilization. It may also be re-used for up to four pallet trips where practical.

EASY

GRIP SHEET® is easy to use and can be put in position either manually or by an automatic palletizing system.

EFFECTIVE

GRIP SHEET® is effective no matter what the load may be : plastic sacks, cardboard cartons, sheet products (e.g paper, glass, tinplate). It has the advantage of keeping the original packaging intact without marking or tearing it. It can save you the trouble and expense of using tape or film in storage or on-site transport, especially for composite loads.
